Pat Q. Student AME 20231 13 January 2022

It is machine-independent. It runs on Linux, Macintosh (see TeXShop), and Windows (see MiKTeX) machines. There are web-based versions, https://www.overleaf.com. You can e-mail ASCII text versions of most relevant files.

It is the tool of choice for many research scientists and engineers. Many journals accept LATEX submissions, and many books are written in LATEX.

Some basic instructions are given next. Put your text in here. You can be a little sloppy about spacing. It adjusts the text to look good. You can make the text smaller. You can make the text tiny.

Skip a line for a new paragraph. You can use italics (e.g. Thermodynamics is everywhere) or **bold**. Greek letters are a snap:  $\Psi$ ,  $\psi$ ,  $\Phi$ ,  $\phi$ . Equations within text are easy—A well known Maxwell thermodynamic relation is  $\frac{\partial T}{\partial P}\Big|_{s} = \frac{\partial v}{\partial s}\Big|_{P}$ . You can also set aside equations like so:

$$du = T ds - P dv,$$
 first law. (1)

$$du = T ds - P dv$$
, first law. (1)  
 $ds \ge \frac{\delta q}{T}$ . second law. (2)

Eq. (??) is the first law. Eq. (??) is the second law. References<sup>1</sup> are available. If you have a postscript file, say sample.figure.eps, in the same local directory, you can insert the file as a figure. Figure ??, below, plots an isotherm for air modeled as an ideal gas.

Figure 1: Sample figure plotting T = 300 K isotherm for air when modeled as an ideal gas.

Running LATEX

You can create a LATEX file with any text editor (vi, emacs, gedit, etc.). To get a document, you need to run the LATEX application on the text file. The text file must have the suffix ".tex" On a Linux cluster machine, this is done via the command

latex file.tex

This generates three files: file.dvi, file.aux, and file.log. The most important is file.dvi.

The finished product can be previewed in the following way. Execute the commands:

dvipdf file.dvi Linux System

<sup>&</sup>lt;sup>1</sup>Lamport, L., 1986, ATEX: User's Guide & Reference Manual, Addison-Wesley: Reading, Massachusetts.

This command generates file.pdf, which can be viewed with many standard tools. Alternatively, you can use TeXShop on a Macintosh or MikTeX on a Windows-based machine. Another very good and modern option is the web-based https://www.overleaf.com. The .tex file must have a closing statement as below. end

## same thim
